

Siyona Mistry

SOFTWARE ENGINEER

Birmingham, AL | 251-423-3868 | siyonamistry@gmail.com | smistry48@gatech.edu | LinkedIn | GitHub

SUMMARY

Software engineer focused on building production software, cloud infrastructure, and products that deliver measurable business impact. Experienced with React, Go, Python, FastAPI, PostgreSQL, and AWS.

SKILLS

Languages	Python, Go, TypeScript, JavaScript, SQL
Frameworks	React, FastAPI, Flask
Cloud & DevOps	AWS (EC2, RDS, S3, IAM), Docker, Nginx, CI/CD
Databases	PostgreSQL
Tools & Practices	Git, Jira, Agile, REST APIs, WebSockets, Authentication (JWT, RBAC)

EXPERIENCE

Software Engineer Feb 2026 – Present

Krown Petroleum

- Sole engineer behind [Krown Connect](#), a production operations platform supporting 30+ employees — owning architecture, deployment, and the full software lifecycle.
- Built and deployed full-stack applications with React, FastAPI, Python, and PostgreSQL on AWS (EC2, RDS, S3, IAM), designing scalable schemas and REST APIs for inventory, receipts, and workflow automation.
- Reduced inventory tracking time by 80% and saved ~30 minutes per form by replacing manual workflows with centralized software and automated document generation.
- Implemented secure authentication (JWT, RBAC, HTTPS, AWS IAM) and deployed containerized services with Docker, Nginx, and SSL/TLS.
- Built a hybrid cloud/on-premises architecture using WebSockets, Raspberry Pi, and a NAS for real-time printing and document management.

Software Engineer Intern

May 2025 – Aug 2025

Guidewire Software

- Developed cloud-native infrastructure and backend tooling using Go, Terraform, AWS, and Kubernetes.
- Supported production deployments, gateway upgrades, and CI/CD workflows for enterprise insurance platforms, debugging Kubernetes workloads and logs to improve reliability.
- Collaborated in Agile teams using Git, Jira, code reviews, and sprint-based development.

Data Intern

Aug 2022 – May 2023

Black Warrior Riverkeeper

- Built Python scripts to extract and organize data from 300+ environmental reports, significantly cutting manual processing time.
- Analyzed environmental datasets and regulatory documents to flag potential Clean Water Act compliance violations.

PROJECTS

pjgas.com

Python · FastAPI · PostgreSQL · React · TypeScript

- Customer-facing site displaying live gas prices, deals, offers, and store information for a local gas station.
- Built a mobile-friendly, SEO-focused interface to improve customer engagement and online visibility.

Chemical Inventory Management System

Swift · Python · Flask

- Built a full-stack lab inventory management app with an iOS frontend and Flask backend as a senior capstone project.
- Implemented authentication, barcode generation, inventory tracking, and REST APIs for chemical and lab inventory.

EDUCATION

M.S. Computer Science — Specialization in AI

Aug 2025 – Present

Georgia Institute of Technology

B.A. Computer Science — 4.0 GPA · Minors in Economics & Business Administration

Aug 2021 – Dec 2024

University of Alabama at Birmingham
